

## SCOTT SAFETY NEWS

March 21, 2014

Dear Valued Customer,

We are very pleased to announce that the **Scott Safety Air-Pak X3 SCBA** and the **Scott Safety Air-Pak 75 SCBA** (AP 75) are now approved to the 2013 Edition of the NFPA 1981 and 1982 Standards. With this approval in place, Scott will commence shipments of the 2013 Edition of the Air-Pak X3 SCBA and Air-Pak 75 SCBA immediately in order to begin to meet the growing customer demand for our 2013 products.

The 2013 Edition Air-Pak SCBA is designed to work with the new AV-3000 HT facepiece, which features an increased level of thermal protection and improved voice intelligibility over previous facepieces. Also optional on any Scott Air-Pak SCBA is the new EPIC 3 voice amplifier, providing louder, clearer communications on the fireground.

The 2013 Edition NFPA approvals are excellent validation of the durability and performance of our proven Air-Pak SCBA, as this Standard included stringent requirements for communications, high heat, and environmental performance.

The Air-Pak SCBA has established itself as the clear leader in the Fire Services, and with these approvals in place, the Air-Pak X3 stands ready to become the new "Leader of the Pak".

If you would like more information on any of our NFPA 2013 product offerings, please visit [www.ScottSafety.com](http://www.ScottSafety.com), or contact your local Scott sales representative.

Sincerely,

Jeff Emery  
Director, Global Marketing
